Automotive Buzz, Squeak and Rattle - 1st Edition

Buzz, squeak and rattle (BSR) testing utilises real life data files to simulate different road profiles which helps to isolate the causes of unwanted audible noises in an automobile. The road simulations therefore are able to provide repeatability during testing. After the testing and evaluation of unwanted sounds, recommendations on how to eliminate them are provided.

Buzz, Squeak & Rattle Testing| TÜV SÜD

Buzz, squeak and rattle are all noises produced by parts installed in such a way that they create annoying sounds. Buzz, squeak and rattle is thus caused by the relative motion between installed parts, which make them interact, sometimes only at certain environmental conditions. More
