Combustion Reaction Method This is the type of method that is used to balanced equations that have oxygen on both sides. Often, these are difficult to balance. When you find difficulty in balancing the equation in the balancing chemical equations worksheet, you can miss it with a fraction of  $\frac{1}{2}$  and that will easily balance the equation.

A combustion reaction is a major class of chemical reactions, commonly referred to as "burning." In the most general sense, combustion involves a reaction between any combustible material and an oxidizer to form an oxidized product. It usually occurs when a hydrocarbon reacts with oxygen to produce carbon dioxide and water.

The general form of these reactions is:  $\text{C}_x\text{H}_y + \text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O}$ . When other fuels burn in oxygen these reactions are also classified as combustion. For example, magnesium metal burns in oxygen to form magnesium oxide. Notice that this reaction could also be classified as a synthesis reaction.
