This moderately- priced, easily installed system utilizes a low-cost magnetic pickup sensing drilled holes (usually in the engine flywheel) to determine the angular position of the crankshaft.

Ignition Systems for Industrial Engines

IGNITION SYSTEM The ignition system of an internal combustion engine is an important part of the overall engine system. All conventional petrol[[1]] (gasoline)[[2]] engines require an ignition system. By contrast, not all engine types need an ignition system - for example, a diesel engine relies on compression-ignition, that is, the rise in

UNIT 4 IGNITION SYSTEMS Ignition Systems

The ignition system is one of the most important systems used in the I.C engines. The spark-ignition engine requires some device to ignite the compressed air-fuel mixture. The ignition takes place inside the cylinder at the end of the compression stroke. Ignition system serves this purpose. It is a part of the electrical system which carries the electrical current to a current plug.
