This is perhaps one of the top reasons out there to use PLC or any device for that matter. Anyone can easily learn the basics of PLC and immediately start using it because it has a very short learning curve.This means that the time that it will take you in getting from step 0 to step 1, where you actuallystart programming a PLC is WAY SHORTER than when you are going to use the microcontroller.

While the application may be simple, a PLC has lots of built-in capabilities to make things happen behind the scenes, without the user programming needed if a microcontroller is used. PLCs have software watchdogs to keep an eye on the executing program, and hardware watchdogs that monitor I/O modules and devices.
